

Esthetically-conscious patients with missing teeth will enjoy an acetal resin partial because it visually disappears in the mouth.

The material is versatile enough to be used for partial dentures, single-sided Nesbit partials, or as a transitional partial while healing from dental implant placement.

Every dental patient is different.

Discuss your dental needs and healthcare goals with your dental professional to determine the very best solution for your unique situation!

Acetal Resin Partial Dentures

A comfortable and economical way to replace missing teeth

Benefits of Acetal Resin Partial Dentures

- ✓ Replaces missing teeth at an economical cost.
- ✓ Comfortable fit thanks to computer-aided design.
- ✓ Conforms well to the contour of your palate.
- ✓ Clasps are secure and kind to your teeth; Clasps are less visible because they are made from a tooth-colored flexible resin material.

Considerations

- ✓ Removable appliance; Must be removed and cleaned after eating and before bedtime.
- ✓ Covers the palate, reducing your taste and temperature sensation.
- ✓ Average lifespan 5-10 years, depending on how you care for it.

You may be a candidate for other tooth replacement alternatives:

Cast Metal Partial Denture – a more rigid partial but with a very precise fit.

Dental Bridgework – fills in the missing teeth with crowns and simultaneously restores the surrounding natural teeth; not removable; care for it the same as your natural teeth.

Dental Implant with Crown – provides the most natural comfort; looks and functions like your own natural teeth in every way.
