

Every dental patient is different.

Discuss your dental needs and healthcare goals with your dental professional to determine the very best solution for your unique situation!

The same bio-compatible material that has been used for years in medicine is finally available in a removable metal partial denture.

Bye-bye to allergic reactions.

Titanium Partial Denture

An unbeatable union of bio-compatible materials offering real comfort with a secure fit.

Benefits of Titanium Partials

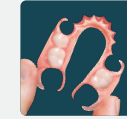

- ✓ Can be a more economical approach to replace missing teeth than crowns, bridges, or implants.
- ✓ Titanium is bio-compatible. The same material that is used to replace knees and hips.
- ✓ Virtually no one is allergic to titanium.
- ✓ Offers lightweight comfort that does not flex or move around while chewing, talking, laughing.
- ✓ Framework is “3-D printed” from a solid plate of titanium for an exact, precise fit.
- ✓ An ideal solution for patients who don't have any back teeth to help support their partial.

Considerations

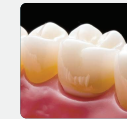

- ✓ Because a titanium partial is a removable appliance, debris will get under it from time to time.
- ✓ Must be removed and cleaned after eating and removed before bedtime.
- ✓ Average lifespan 5 to 10 years, depending on how you care for the partial and how much your mouth changes as you age.

You may be a candidate for other prosthetic alternatives:

Flexible Partial Denture – a softer and more cushiony removable partial; doesn't fit as precisely as a titanium partial.

Dental Bridgework – fills in the missing teeth with crowns for both the missing teeth and any surrounding natural teeth; not removable.

Dental Implants with Crowns – the nearest thing to your natural teeth; bulky extra material is not necessary to support the artificial teeth.
