Benefits of Ceramic Veneers

- ✓ Improves the smile line – hides imperfections, eliminates the appearance of crowded or slightly overlapped teeth.
- ✓ Closes small spaces between the natural teeth.
- ✓ Unifies tooth color with the neighboring teeth.
- ✓ Tooth preparation is minimal and conserves more natural tooth structure than crowns.
- ✓ Milled from solid ingots using CAD/CAM technology for a precise fit.

Considerations

- ✓ To achieve the best results, professional-grade tooth bleaching is recommended prior to preparing the teeth for veneers.
- ✓ 10 to 15-year average lifespan, depending on home care.
- ✓ Material can be fractured – not suitable for patients who have a hard bite or grind their teeth.

You May Be a Candidate for Other Temporary or Permanent Aesthetic Alternatives Depending on your Needs:
