Zirconia Crowns

Virtually indestructible is the phrase that encapsulates the strength of zirconia crowns and bridges.

Benefits of Zirconia Crowns

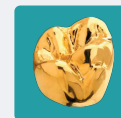

- ✓ Restores function to broken teeth. Strengthens teeth that have excessively large fillings.
- ✓ An all-ceramic material without a metal substructure that may show through.
- ✓ Multiple color options available.
- ✓ Bio-compatible.
- ✓ Wear resistant; difficult to crack; ideal for patients with a hard bite or who grind their teeth.
- ✓ The strength of zirconia makes it suitable for bridges.
- ✓ Milled from a solid zirconia block using CAD/CAM technology for a precise fit.

Considerations

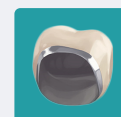

- ✓ Not as lifelike in appearance as some other crown options.
- ✓ Harder than enamel.
- ✓ Zirconia hides stained or dark underlying tooth discoloration well
- ✓ Because zirconia is relatively new to dentistry, there are no longevity studies; average lifespan is currently unknown.

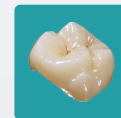

You may be a candidate for other tooth replacement alternatives:

Cast metal (Gold or Silver) crowns.

Porcelain fused-to-metal (PFM) crowns.

IPS e. Max crowns.
